

Military Specification NANO connectors

Cristek is leading a cooperative industry effort to develop and document standardized interfaces and performance criteria. The specification, which is being jointly developed by the leading manufacturers of Nano technology, will be submitted to Defense Supply Center Columbus (DSCC). Our consortium will encourage the agency to issue a government document to assist users in multiple sourcing efforts. This effort will reduce variability from one manufacturer to the next and increase overall reliability and acceptance of this important technology.

The document was not available from DSCC at the time of this publication but check the catalog section of the Cristek website for the current status of these efforts

2.1 NANO CONNECTORS / MILITARY
