

Circular Connectors

Cristek offers a broad line of the smallest, high reliability, circular connectors available today. The panel-mounted connectors are ideal for applications where an ultra-miniature I/O connector is needed for your box. These parts can be purchased to protect against fluid immersion and most have excellent EMI shielding characteristics. Small circular connectors are ergonomically desirable for human interface.

Ranges of coupling/decoupling choices are available depending on the application. All cable connectors can be supplied with strain relief/EMI adapter backshells for customer cable termination and/or molding or alternatively, Cristek can fabricate a turnkey cable specifically engineering to meet your needs.

Accessories such as EMI and/or immersion proof dust caps can also be provided.

Connectors can be designed with Micro, Nano, RF or high voltage contacts. All products can be EMI filtered. Other than the Nano, this is Cristek's most dynamic product area so if you don't see what you are looking for in the catalog, please consult the factory.
