

D-Subminiature Space Application Connectors

Cristek has manufactured an extensive range of cables and connectors for use in various manned and unmanned space applications. We have materials and processes that meet the outgassing requirements of ASTM-E-595 and NASA-RP-1124. D-Subminiatures that meet the requirements of Goddard specs GSFC 5311-P-4 and P-10 are available as well as JPL spec CS512091.

At the time of publication, Cristek was compiling the information on all of the custom and modified products produced over the years so a standard product offering can be published. Consult the factory if you have a current application for space flight and we will respond. Once a standard product offering is published, it will be available on the Cristek website.
